

ALL SAINTS' CE PRIMARY

WORKING SCIENTIFICALLY PROGRESSION OF SKILLS

EYFS (2021 Framework)		KS1
PLAN	<ul style="list-style-type: none"> - Understand 'why' questions, like: "Why do you think the caterpillar got so fat?" - Learn new vocabulary. - Ask questions to find out more and to check what has been said to them. - Explore collections of materials with similar and/or different properties. - <i>Choose the resources they need for their chosen activities and say when they do or don't need help.</i> 	<p style="text-align: center;"><i>Asking simple questions and recognising that they can be answered in different ways</i></p> <ul style="list-style-type: none"> - While exploring the world, the children develop their ability to ask questions (such as what something is, how things are similar and different, the ways things work, which alternative is better, how things change and how they happen). - Where appropriate, they answer these questions. - The children answer questions developed with the teacher often through a scenario. - The children are involved in planning how to use resources provided to answer the questions using different types of enquiry, helping them to recognise that there are different ways in which questions can be answered
DO	<ul style="list-style-type: none"> - Explore the natural world around them, making observations and drawing pictures of animals and plants. - Know some similarities and differences between the natural world around them and contrasting environments, drawing on their experiences and what has been read in class. - Use all their senses in hands-on exploration of natural materials. - Explore collections of materials with similar and/or different properties. - Explore how things work. - Explore and talk about different forces they can feel. - Talk about the differences between materials and changes they notice. 	<p style="text-align: center;"><i>Observing closely, using simple equipment</i></p> <ul style="list-style-type: none"> - Children explore the world around them. They make careful observations to support identification, comparison and noticing change. They use appropriate senses, aided by equipment such as magnifying glasses or digital microscopes, to make their observations. - They begin to take measurements, initially by comparisons, then using non-standard units. <p style="text-align: center;"><i>Performing simple tests</i></p> <ul style="list-style-type: none"> - The children use practical resources provided to gather evidence to answer questions generated by themselves or the teacher. They carry out: tests to classify; comparative tests; pattern seeking enquiries; and make observations over time. <p style="text-align: center;"><i>Identifying & Classifying</i></p> <ul style="list-style-type: none"> - Children use their observations and testing to compare objects, materials and living things. They sort and group these things, identifying their own criteria for sorting. - They use simple secondary sources (such as identification sheets) to name living things. They describe the characteristics they used to

		identify a living thing.
RECORD	<ul style="list-style-type: none"> - Talk about what they see, using a wide vocabulary. - Articulate their ideas and thoughts in well-formed sentences. - Describe events in some detail. - Use talk to work out problems and organise thinking and activities. Explain how things work and why they might happen. - Use new vocabulary in different contexts. - Describe what they see, hear and feel while they are outside. 	<p style="text-align: center;"><i>Gather and record data to help in answering questions</i></p> <ul style="list-style-type: none"> - The children record their observations e.g. using photographs, videos, drawings, labelled diagrams or in writing. - They record their measurements e.g. using prepared tables, pictograms, tally charts and block graphs. - They classify using simple prepared tables and sorting rings
REVIEW	<ul style="list-style-type: none"> - Make comments about what they have heard and ask questions to clarify their understanding. - Understand some important processes and changes in the natural world around them, including the seasons and changing states of matter. - Recognise some environments that are different to the one in which they live. - Begin to understand the need to respect and care for the natural environment and all living things. - Explain why some things occur and talk about changes. 	<p style="text-align: center;"><i>Using their observations and ideas to suggest answers to questions</i></p> <ul style="list-style-type: none"> - Children use their experiences of the world around them to suggest appropriate answers to questions. They are supported to relate these to their evidence e.g. observations they have made, measurements they have taken or information they have gained from secondary sources. - The children recognise 'biggest and smallest', 'best and worst' etc. from their data.

PLAN	<p>Ask relevant questions and using different types of scientific enquiries to answer them</p> <ul style="list-style-type: none"> - The children consider their prior knowledge when asking questions. They independently use a range of question stems. Where appropriate, they answer these questions. - The children answer questions posed by the teacher. - Given a range of resources, the children decide for themselves how to gather evidence to answer the question. - They recognise when secondary sources can be used to answer questions that cannot be answered through practical work. They identify the type of enquiry that they have chosen to answer their question. 	<p>Plan different types of scientific enquiries to answer questions, including recognising and controlling variables where necessary</p> <ul style="list-style-type: none"> - Children independently ask scientific questions. This may be stimulated by a scientific experience or involve asking further questions based on their developed understanding following an enquiry. - Given a wide range of resources the children decide for themselves how to gather evidence to answer a scientific question. They choose a type of enquiry to carry out and justify their choice. They recognise how secondary sources can be used to answer questions that cannot be answered through practical work. - The children select from a range of practical resources to gather evidence to answer their questions. They carry out fair tests, recognising and controlling variables. They decide what observations or measurements to make over time and for how long. They look for patterns and relationships using a suitable sample.
DO	<p>Make systematic and careful observations and, where appropriate, take accurate measurements using standard units, use a range of equipment, including thermometers and data loggers</p> <ul style="list-style-type: none"> - The children make systematic and careful observations. - They use a range of equipment for measuring length, time, temperature and capacity. They use standard units for their measurements. <p>Setting up simple practical enquiries, comparative and fair tests</p> <ul style="list-style-type: none"> - The children select from a range of practical resources to gather evidence to answer questions generated by themselves or the teacher. 	<p>Take measurements, using a range of scientific equipment, with increasing accuracy and precision, taking repeat readings when appropriate</p> <ul style="list-style-type: none"> - The children select measuring equipment to give the most precise results e.g. ruler, tape measure or trundle wheel, force meter with a suitable scale. - During an enquiry, they make decisions e.g. whether they need to: take repeat readings (fair testing); increase the sample size (pattern seeking); adjust the observation period and frequency (observing over time); or check further secondary sources (researching); in order to get accurate data (closer to the true value).

WORKING SCIENTIFICALLY PROGRESSION OF SKILLS

	<p>- They follow their plan to carry out: observations and tests to classify; comparative and simple fair tests; observations over time; and pattern seeking.</p> <p>Explanatory note <i>A comparative test is performed by changing a variable that is qualitative e.g. the type of material, shape of the parachute. This leads to a ranked outcome.</i> <i>A fair test is performed by changing a variable that is quantitative e.g. the thickness of the material or the area of the canopy. This leads to establishing a causative relationship.</i></p>	
<p>RECORD</p>	<p><i>Gather, record, classify and present data in a variety of ways to help in answering questions</i> <i>Record findings using simple scientific language, drawings, labelled diagrams, keys, bar charts, and tables</i></p> <p>- The children sometimes decide how to record and present evidence. They record their observation e.g. using photographs, videos, pictures, labelled diagrams or writing. - They record their measurements e.g. using tables, tally charts and bar charts (given templates, if required, to which they can add headings). - They record classifications e.g. using tables, Venn diagrams, Carroll diagrams. - Children are supported to present the same data in different ways in order to help with answering the question.</p>	<p><i>Record data and results of increasing complexity using scientific diagrams and labels, classification keys, tables, scatter graphs, bar and line graphs</i></p> <p>- The children decide how to record and present evidence. They record observations e.g. using annotated photographs, videos, labelled diagrams, observational drawings, labelled scientific diagrams or writing. They record measurements e.g. using tables, tally charts, bar charts, line graphs and scatter graphs. They record classifications e.g. using tables, Venn diagrams, Carroll diagrams and classification keys. - Children present the same data in different ways in order to help with answering the question.</p>
<p>REVIEW</p>	<p><i>Use straightforward scientific evidence to answer questions or to support their findings</i></p> <p>- Children answer their own and others' questions based on observations they have made, measurements they have taken or information they have gained from secondary sources. The answers are consistent with the evidence.</p>	<p><i>Identify scientific evidence that has been used to support or refute ideas or arguments</i></p> <p>- Children answer their own and others' questions based on observations they have made, measurements they have taken or information they have gained from secondary sources. When doing this, they discuss whether other evidence e.g. from other groups,</p>

ALL SAINTS' CE PRIMARY

WORKING SCIENTIFICALLY PROGRESSION OF SKILLS

<p>Identify differences, similarities or changes related to simple scientific ideas and processes.</p> <p>Identify differences, similarities or changes related to simple scientific ideas and processes</p> <ul style="list-style-type: none"> - Children interpret their data to generate simple comparative statements based on their evidence. They begin to identify naturally occurring patterns and causal relationships. <p>Use results to draw simple conclusions, make predictions for new values, suggest improvements and raise further questions</p> <ul style="list-style-type: none"> - They draw conclusions based on their evidence and current subject knowledge. - They identify ways in which they adapted their method as they progressed or how they would do it differently if they repeated the enquiry. - Children use their evidence to suggest values for different items tested using the same method e.g. the distance travelled by a car on an additional surface. - Following a scientific experience, the children ask further questions which can be answered by extending the same enquiry. <p>Report on findings from enquiries, including oral and written explanations, displays or presentations of results and conclusions</p> <ul style="list-style-type: none"> - They communicate their findings to an audience both orally and in writing, using appropriate scientific vocabulary. 	<p>secondary sources and their scientific understanding, supports or refutes their answer.</p> <ul style="list-style-type: none"> - They talk about how their scientific ideas change due to new evidence that they have gathered. - They talk about how new discoveries change scientific understanding. <p>Report and present findings from enquiries, including conclusions, causal relationships and explanations of and degree of trust in results, in oral and written forms such as displays and other presentations</p> <ul style="list-style-type: none"> - In their conclusions, children: identify causal relationships and patterns in the natural world from their evidence; identify results that do not fit the overall pattern; and explain their findings using their subject knowledge. - They evaluate, for example, the choice of method used, the control of variables, the precision and accuracy of measurements and the credibility of secondary sources used. - They identify any limitations that reduce the trust they have in their data. - They communicate their findings to an audience using relevant scientific language and illustration <p>Use test results to make predictions to set up further comparative and fair tests</p> <ul style="list-style-type: none"> - Children use the scientific knowledge gained from enquiry work to make predictions they can investigate using comparative and fair tests.
